## Bug Summary

| Bug ID | Title                                                                            | Severity | Priority | Status      |
|--------|----------------------------------------------------------------------------------|----------|----------|-------------|
| BD-1   | Registration form returns 419 Page Expired error - CSRF token failure            | Critical | Highest  | In Progress |
| BD-2   | Login form returns 419 Page Expired error - CSRF token failure                   | Critical | Highest  | In Progress |
| BD-3   | Password Reset form returns 419 Page Expired error - CSRF token failure          | Critical | Highest  | In Progress |
| BD-4   | Purchase form accepts submission with all fields empty - No input validation     | High     | High     | In Progress |
| BD-5   | Confirmation page displays hardcoded credit card number regardless of user input | Medium   | Medium   | In Progress |

## Jira Bug List Screenshot

Jira bug list showing all 5 BlazeDemo bugs

## BD-1: Registration form returns 419 Page Expired error - CSRF token failure

Severity: Critical

Priority: Highest

**Status:** In Progress

**Type:** Bug

### Bug Description

When a user attempts to register on the BlazeDemo site, submitting the registration form results in a '419 Page Expired' error page. This indicates a CSRF token validation failure.

### Steps to Reproduce

1. Navigate to <https://blazedemo.com/register>
2. Fill in the registration form fields such as name, email, and password
3. Click the Register/Submit button
4. Observe the error page

### Expected Result

The registration form should submit successfully and either create a new account or display proper validation messages.

### Actual Result

A '419 Page Expired' error page is displayed, indicating the CSRF token is missing or invalid. The registration process fails completely.

### Environment

Browser: Chrome | OS: Windows | URL: <https://blazedemo.com/register>

### Screenshot / Evidence

The screenshot shows a Jira interface for a bug report. The bug is titled "[CRITICAL] Registration form returns 419 Page Expired error - CSRF token failure" and is in the "In Progress" state. The bug is assigned to Nishant Kumar and reported by Nishant Kumar. The labels are "CSRF", "blocker", and "registration". The due date is "None" and the start date is "None". The priority is "Highest". The bug is located in the "BD board" space. The bug description states: "When a user attempts to register on the BlazeDemo site, submitting the registration form results in a '419 Page Expired' error page. This indicates a CSRF (Cross-Site Request Forgery) token validation failure." The steps to reproduce are: 1. Navigate to <https://blazedemo.com/register>, 2. Fill in the registration form fields (name, email, password), 3. Click the Register/Submit button, 4. Observe the error page. The expected result is: "The registration form should successfully submit and either create a new account or display appropriate validation messages." The actual result is: "A '419 Page Expired' error page is displayed, indicating the CSRF token is missing or invalid. The registration process fails completely."

*BD-1 Registration 419 Page Expired - CSRF token failure*

### BD-2: Login form returns 419 Page Expired error - CSRF token failure

**Severity:** Critical

**Priority:** Highest

**Status:** In Progress

**Type:** Bug

## Bug Description

When a user attempts to log in on the BlazeDemo site, submitting the login form results in a '419 Page Expired' error page. This prevents user authentication.

## Steps to Reproduce

1. Navigate to <https://blazedemo.com/login>
2. Enter a valid email address
3. Enter a password
4. Click the Login/Submit button
5. Observe the 419 error page

## Expected Result

The login form should authenticate the user and redirect to the dashboard or homepage. Invalid credentials should show a proper message.

## Actual Result

A '419 Page Expired' error page is displayed regardless of credentials entered. No user can log in.

## Environment

Browser: Chrome | OS: Windows | URL: <https://blazedemo.com/login>

## Screenshot / Evidence

*BD-2 Login 419 Page Expired - CSRF token failure*

## BD-3: Password Reset form returns 419 Page Expired error - CSRF token failure

**Severity:** Critical

**Priority:** Highest

**Status:** In Progress

**Type:** Bug

## Bug Description

When a user attempts to reset their password on BlazeDemo, submitting the password reset form results in a '419 Page Expired' error page. This prevents account recovery.

## Steps to Reproduce

1. Navigate to <https://blazedemo.com/password/email>
2. Enter a valid email address
3. Click the Send Password Reset Link button
4. Observe the 419 error page

## Expected Result

The system should send a password reset email and display a confirmation message such as 'Password reset link sent to your email'.

## Actual Result

A '419 Page Expired' error page is displayed. No password reset email is sent.

## Environment

Browser: Chrome | OS: Windows | URL: <https://blazedemo.com/password/email>

## Screenshot / Evidence

The screenshot shows a Jira bug report for issue BD-3. The title is "[CRITICAL] Password Reset form returns 419 Page Expired error - CSRF token failure". The bug is assigned to Nishant Kumar and reported by Nishant Kumar. The labels include "CSRF", "authentication", "blocker", and "password-reset". The priority is set to "Highest". The bug is currently in the "In Progress" state. The description states: "When a user attempts to reset their password on the BlazeDemo site, submitting the password reset form results in a '419 Page Expired' error page. This indicates a CSRF (Cross-Site Request Forgery) token validation failure, preventing users from recovering their accounts." The steps to reproduce are: 1. Navigate to <https://blazedemo.com/password/email>, 2. Enter a valid email address in the email field, 3. Click the 'Send Password Reset Link' button, 4. Observe the 419 error page. The expected result is: "The system should send a password reset email to the provided email address and display a confirmation message such as 'Password reset link sent to your email'." The actual result is: "A '419 Page Expired' error page is displayed. No password reset email is sent. The CSRF token is missing or invalid. Users who have forgotten their passwords are completely unable to recover their accounts." The URL <https://nishantk7007.atlassian.net/jira/for-you> is visible at the bottom left of the screenshot.

*BD-3 Password Reset 419 Page Expired - CSRF token failure*

## BD-4: Purchase form accepts submission with all fields empty - No input validation

**Severity:** High

**Priority:** High

**Status:** In Progress

**Type:** Bug

## Bug Description

The flight purchase form does not perform required validation. Users can submit the purchase form with all fields empty, and the system still processes the booking.

## Steps to Reproduce

1. Navigate to <https://blazedemo.com>
2. Select any departure and destination city
3. Click Find Flights

4. Click Choose This Flight for any flight
5. Clear all fields on the Purchase page
6. Click Purchase Flight without entering data
7. Observe that booking is confirmed

### Expected Result

The form should validate required fields and display error messages for empty or invalid inputs. The form should not submit until all mandatory data is entered.

### Actual Result

The booking is confirmed even when all required fields are empty.

### Environment

Browser: Chrome | OS: Windows | URL: <https://blazedemo.com/purchase.php>

### Screenshot / Evidence

The screenshot shows a Jira bug report interface. The bug title is "[HIGH] Purchase form accepts submission with all fields empty - No input validation". The bug is assigned to Nishant Kumar and is currently in progress. The description states: "The flight purchase form on the BlazeDemo site does not perform any client-side or server-side validation. Users can submit the form with all fields completely empty (Name, Address, City, State, Zip Code, Credit Card Number, etc.) and the system will process the booking and display a confirmation page." The steps to reproduce are listed as follows: 1. Navigate to <https://blazedemo.com>, 2. Select any departure and destination city, 3. Click 'Find Flights', 4. Click 'Choose This Flight' for any listed flight, 5. On the Purchase page, clear ALL form fields (Name, Address, City, State, Zip, Card Number, etc.), 6. Click 'Purchase Flight' without entering any data, 7. Observe that the booking is confirmed with a confirmation page. The expected result is that the form should validate all required fields and display error messages for empty or invalid inputs. The actual result is that the booking is confirmed even when all required fields are empty.

*BD-4 Purchase form accepts empty submission*

## BD-5: Confirmation page displays hardcoded credit card number regardless of user input

**Severity:** Medium

**Priority:** Medium

**Status:** In Progress

**Type:** Bug

### Bug Description

After completing a flight purchase, the confirmation page always displays the same hardcoded masked credit card number 'xxxxxxxxxxx1111' regardless of user input.

### Steps to Reproduce

1. Navigate to <https://blazedemo.com>
2. Select cities and click Find Flights
3. Choose any listed flight

4. Enter a credit card number or leave it blank
5. Click Purchase Flight
6. On the confirmation page, observe the CardNumber field

## Expected Result

The confirmation page should display the last 4 digits of the actual credit card number entered, properly masked. If no card was entered, an error message should be shown.

## Actual Result

The confirmation page always displays 'xxxxxxxxxx1111', suggesting static hardcoded confirmation data.

## Environment

Browser: Chrome | OS: Windows | URL: <https://blazedemo.com/confirmation.php>

## Screenshot / Evidence

The screenshot shows a Jira bug report interface. The bug title is "[MEDIUM] Confirmation page displays hardcoded credit card number regardless of user input". The description explains that the confirmation page always shows a hardcoded masked credit card number 'xxxxxxxxxx1111' instead of the user's actual input. The steps to reproduce are listed, and the expected result is that the last 4 digits of the user's card should be displayed. The actual result confirms that the value is static. The environment section specifies the URL: <https://blazedemo.com/confirmation.php>.

*BD-5 Confirmation page hardcoded card number*

## Conclusion

The above bugs impact BlazeDemo user registration, login, password reset, purchase validation, and confirmation data integrity. Critical CSRF issues should be fixed first, followed by purchase form validation and confirmation page data correction.
